High-Reliability and High-Performance Compact Machining Center

FANUC ROBODRILL α-DiB series
High-Reliability and High-Performance Compact Machining Center

**FANUC ROBODRILL α-DiB series**

**High Performance of Machining**
- High speed, High precision, High power
- Stable machining
- Wide range of application

**Minimizing Down Time**
- High reliability
- Preventive maintenance function
- High maintainability

**Ease of Use**
- Excellent user-Interface
- High expandability
- Simple integration with FANUC Robot

**Applying the latest FANUC CNC & Servo technology**

**Good combination with FANUC Robot**
High Performance of Machining
Achieving high productivity by high speed, high precision and high power
Achieving high yield of workpiece by stable machining
Utilization in various areas by wide range of application

Minimizing Down Time
Achieving long operation life by high reliability
Prevention of trouble by preventive maintenance function
Minimizing down time by high maintainability

Ease of Use
Easy utilization of high function by excellent user-Interface
Easy operation of peripheral equipment by high expandability
Realizing simple integration with FANUC Robot by automation support function

*1 Photo when DDR mounted
*2 Photo when front doors option mounted
High Performance of Machining

Wide variety of high speed and high power spindle

- High speed and high power spindle
  - High rigidity mechanism and outstanding rigidity of main spindle enabling excellent ability in milling in addition to drilling and tapping
- Optimum spindle selectable according to application
  - Standard spindle: Applicable to wide range machining use
  - High torque spindle: Applicable to heavy machining of steel parts
  - High acceleration spindle: Applicable to high speed and high efficiency machining of aluminum parts
  - High speed spindle: Applicable to smooth surface machining

High speed spindle

FANUC ROBODRILL DDRi (option)

- High-speed and high-precision additional 1-axis rotary table
  - DDRi (option)
    - Synchronous built-in servo motor and aiCZ sensor provide non-backlash, high-speed and high-precision machining
- High-rigidity trunion unit with DDRi DDR-Ti (option)
  - Easy to develop indexing fixture making the best use of ROBODRILL’s working space

**DDRi specifications**

*When loading capacity less than 25kg and loading inertia less than 0.25 kg·m²*
High speed machining

- Smart overlap function
  - Achieving cycle time reduction by overlapping on the transition between rapid traverse and cutting feed
  - Easy setting by selecting ON/OFF on the screen

- Overlap of the ATC and table motion
  - Achieving cycle time reduction by overlapping Z-axis ascent/descent and other axes motion during tool change

High precision and fine surface machining

- Latest CNC and Servo functions
  - SERVO HRV⁺ control
    Achieving high responsiveness by optimized electrical control
  - Latest AC Servo Motor
    Applying the latest AC Servo Motor which provides more smoother feed
  - Least input increment 0.1 μm (IS-C)
    Addition of setting for least unit 0.1 μm for program command
  - Achieving higher surface quality and improvement of circularity and so on, by applying each function

Stable machining

- AI thermal displacement compensation function
  - Real time compensation by estimating the thermal displacement along each axis based on the operation status of the spindle and feed axes
  - By using touch probe (option), compensation effect adjustment can be performed automatically from the measurement result
  - By using temperature sensors (option), more accurate compensation can be achieved.
  - Even if some of sensors got trouble, sensor check function will keep proper compensation.
Minimizing Down Time

Excellent chip countermeasure

- X-axis telescopic cover with 3 pieces (option)
  - Enhanced covering against chips and coolant by improved shape of telescopic cover
  - Reduction of the impact against telescopic cover by 3 pieces structure enhances durability of cover and cushion rubber

- Cleaning unit for tool taper shank (option)
  - Flushing the tool taper shank by coolant during tool change to prevent catching chips on the spindle taper
  - Stable machining accuracy can be maintained

Complete operation management

- ROBODRILL-Linki (PC software)
  - Real time display of the entire production area helps to understand the condition of each machine at once
  - Supporting improvement of machine utilization by collecting and visualizing each machine’s information
  - Operation achievement data for each machine are collected and displayed in the graph
  - The system can be built with general PC and no server PC is required
  - Collecting ROBODRILL’s additional information such as periodical maintenance data, tool life, etc.
  - NC program can be transferred to multiple ROBODRILLS simultaneously

High maintainability

- Information center
  - Alarm messages and their detailed information are displayed
  - Cause of alarm can be identified from the detailed information

- Improvement of maintainability for I/O device
  - Cause and point of the failure of I/O devices (disconnection, earth fault etc.) are identified
  - The facility availability ratio is improved due to the reduction of down time
High reliability

- Abundant track records at FANUC in-house factory
  - Using ROBODRILLS for both steel and aluminum parts machining at FANUC in-house factory
- Applying maintenance data of FANUC in-house factory
  - Accumulating maintenance data of ROBODRILL obtained at FANUC in-house factory
  - Achieving high reliability by returning the maintenance data to ROBODRILL design

Complete preventive maintenance

- Maintenance information management
  - Monitoring the condition of maintenance items and announcing the abnormality or maintenance timing to support effective periodical maintenance
  - Possible to set customized maintenance items (Max. to 10)
- Leakage Detection Function
  - Early detection of insulation resistance drop of each motor and motor power cable
  - Enable preventive maintenance before breakdown
- Fan Monitor Function
  - Monitoring cooling fans of CNC, Servo Amplifiers, Spindle Amplifier and Power Supply
  - Announcing before failure when the rotation speed of the cooling fans is dropping
  - Easy to detect the abnormal fan

- Machine configuration to improve parts replacement
  - New fan motor units are applied for easy parts replacement
  - The facility availability ratio is improved due to the reduction of maintenance time

- RECHARGEABLE BATTERY UNIT (option)
  - Supplying backup power both CNC and PULSECORDER instead of disposable battery
  - Automatically recharged while ROBODRILL power ON
  - Battery maintenance free
Ease of Use

The latest CNC of FANUC

- 10.4” Color LCD with \textit{iHMI}
  - Intuitive and operable interface by \textit{iHMI}
  - Easy operation on programming, setup and machining
  - Seamless flat display unit achieves tolerance to coolant oil resistant and designability

- Operator’s panel
  - Improving operability and visibility by renewing key layout and indicators
  - Unity design with CNC display unit

High usability

- Easy to use screens from programming to maintenance
  - CNC operation screen
    Operable screen structure arranged by operation steps of “programming”, “setup” and “machining” Graphical display enhances visibility
  - Machine operation setting screen
    Parameters related with work load, machining mode and energy saving can be switched easily according to applications
  - Restoration screen
    Particular maintenance of ROBODRILL such as turret restoration or motor reference position recovery can be performed easily

- Integrated operation, programming guidance (\textbf{MANUAL GUIDE \textit{i}})
  - Easy to program and operate machining on one screen
  - Easy to program with G code through graphic guide
  - Simple machining simulation of solid model
Automation application

- Quick and Simple Startup of Robotization (QSSR) (option)
  - Useful package of robot, robot base, auto side door, connecting cables, sample programs, easy setting function etc.
  - Easy to introduce robot system
- Robot interface 2 (option)
  - Reducing cables and keeping safety by FL-net function
  - Robot manual operation is available on the ROBODRILL screen
  - ROBODRILL manual operation is available on the Robot teach pendant

High expandability

- External interface function
  - General I/O signals such as external start are ready to use only by selecting settings
  - Lighting conditions of signal lamps can be set on the screen
- Custom control panel
  - On screen switches (ON/OFF or pulse) and indication lamps can be created
  - Peripheral devices are operated without integrating control panel hardware
  - Flexible and cost saving solution for simple system integration
- Custom PMC function
  - LADDER program to control peripheral devices can be created and monitored on screen
  - Number of I/O signals can be expanded
    - Standard: Input 16 / Output 16
    - Max: Input 1024 / Output 1024 (option)

Technology for power saving

- Proven power regeneration function
  - The power regeneration function that use regenerating energy occurred on deceleration of motors has been adopted since 1994.

Conformity of safety standards

- Conformity of each country’s safety standard (option)

Available Options

- Top cover
- Coolant unit (tank)
- LED Illumination
- Tool length switch for automatic measurement

Coolant unit with chip flush (spot gun provided)
Automatic Grease Lubricating System (LHL Liquid Grease)
Automatic Oil Lubricating System
Touch probe

(Note)
- The machine life may be shortened depending on the workpiece, tool, coolant, or lubricant to be used.

Maintenance and Customer Support

Worldwide Customer Support and Service

FANUC operates customer service and support system anywhere in the world through subsidiaries, affiliates and distributor partners. FANUC provides the highest quality service with the quickest response at the location nearest you.

FANUC ACADEMY

FANUC ACADEMY operates training programs on FANUC ROBODRILL which focus on practical operations and programming with machining know how and maintenance.

</table>

*1 Positioning accuracy is the adjusted and measured value in compliance with applicable standard at FANUC's factory. Depending on an influence of JIG & workpiece mass on table, the use conditions and installation environment, there may be a case where the accuracy shown in this catalog cannot be achieved.

*2 Sound pressure level is measured in compliance with FANUC's own regulation. Depending on the use conditions and installation environment, there may be a case where the sound pressure level shown in this catalog cannot be achieved.

*3 The machine must be mounted to the floor (mounting anchors) may be required depending on the use conditions and installation environment, or to prevent the machine from toppling over due to an earthquake.

*4 In case of center through coolant and cleaning unit for tool taper shank, additional +1kVA is required respectively. In case of additional 1 axis, additional maximum + 1.5kVA is required. A cable with 10mm² or more should be used at primary power connection.

*5 In case of center through coolant, additional +0.05m³/min is required. In case of air blow for chips, additional +0.2m³/min is required. In case of side automatic door, 0.4Mpa compressed air supply or more is required.
